## Annex to Resolution 11.17 (Rev.COP13)/Rev.1

# AFRICAN-EURASIAN MIGRATORY LANDBIRDS ACTION PLAN (AEMLAP)

# IMPROVING THE CONSERVATION STATUS OF MIGRATORY LANDBIRD SPECIES IN THE AFRICAN-EURASIAN REGION

(Prepared by the African-Eurasian Migratory Landbirds Working Group)

Adopted by the 11th Meeting of the Conference of the Parties to CMS, November 20141.

#### **EXECUTIVE SUMMARY**

The African-Eurasian Migratory Landbirds Action Plan (AEMLAP) is aimed at improving the conservation status of migratory landbird species in the African-Eurasian region through the international coordination of action for these species, and catalysing action at the national level. The overall goal is to develop an initial overarching, strategic framework for action at the international level to conserve, restore and sustainably manage populations of migratory landbird species and their habitats.

This complements the work of the Agreement on the Conservation of African-Eurasian Migratory Waterbirds (AEWA) and the Memorandum of Understanding on the Conservation of Migratory Birds of Prey in Africa and Eurasia (Raptor MOU) to restore the status of other African-Eurasian bird species.

This Action Plan covers 42 globally threatened migratory landbird species, 138 Least Concern migratory landbird species with decreasing global population trends and 373 Least Concern migratory landbird species with increasing, stable or unknown global population trends. Consult Annexes 1 and 3 for the background information and species list, respectively<sup>1</sup>.

The thematic areas of the AEMLAP focus are habitat conservation, taking and trade, research and monitoring, and education and information, as well as 'other issues' covering diseases and collision. The most important identified threat to migratory landbird species is **habitat loss and degradation** at breeding and non-breeding sites, as well as at the network of sites these species depend on during migration. **Taking and trade** for economic and cultural purposes can also negatively influence some populations. Other threats include the risk of **disease** and **collision**.

In response to these threats, there is an urgent need **for research and monitoring** as well as **education and information** to provide useful data that directs conservation efforts and increases public awareness and support, respectively. All of these threats and responses are covered by the various actions contained in this Action Plan.

<sup>&</sup>lt;sup>1</sup> In implementing Decision 12.22 c), the AEMLAP species lists in Annex 3 were updated by the 13<sup>th</sup> Meeting of the Conference of the Parties based on the relevant adopted taxonomic reference Handbook of the Birds of the World - BirdLife Version 3.0, November 2018, and IUCN Red List of birds (BirdLife International 2018) and the IUCN Species Information Service (SIS) database (2018). In the Executive Summary, the figures of species contained in each category A, B and C were updated accordingly in response to changes in the IUCN Red list status and global population trend.

#### AFRICAN-EURASIAN MIGRATORY LANDBIRD SPECIES ACTION PLAN

#### INTRODUCTION

The Convention on the Conservation of Migratory Species of Wild Animals (CMS), signed at Bonn on 23 June 1979, calls for international co-operative action to conserve migratory species. Article IV.4 of the Convention encourages Parties to conclude agreements, including non-legally binding administrative agreements, in respect of any populations of migratory species.

Accordingly, at the 10<sup>th</sup> Conference of the Parties (COP) of CMS, Resolution 10.27 on *Improving the Conservation Status of Migratory Landbirds in the African Eurasian Region* was adopted. It urges Parties to develop an Action Plan for the conservation of African-Eurasian migrant landbird species and their habitats throughout the flyway and calls for the establishment of a working group to steer the production and implementation of the Action Plan.

To this end, the African-Eurasian Migratory Landbird Working Group (AEML-WG) and Steering Group (AEML-SG) were set up. The AEML-WG is established under the CMS Scientific Council and comprises technical and policy experts nominated by the Scientific Council, from across the African-Eurasian flyway region, contributing to the development and implementation of the Action Plan. The AEML-SG is a closed subset of the AEML-WG, coordinating the Action Plan development and implementation process.

Migratory landbird species constitute an important part of the global biological diversity which, in keeping with the spirit of the Convention on Biological Diversity (1992) and Agenda 21, should be conserved for the benefit of present and future generations. Many populations of migratory landbird species that migrate over long distances between and within Africa and Eurasia are particularly vulnerable because they cross the territory of different countries and make these annual and cyclic movements on a broad front – having a widely dispersed distribution across habitats.

There is increasing concern regarding the considerable number of African-Eurasian migratory landbird species, especially those that spend the non-breeding season south of the Sahara, that have declining population trends at a national, regional and/or global level. There is also concern over the lack of knowledge of the status and trends of many migratory landbird species in Africa and Asia. Urgent action is needed to reverse significant and potentially significant population declines.

Among the factors that contribute to the unfavourable conservation status of many African-Eurasian migratory landbird species, the loss, degradation and fragmentation of habitats resulting from human economic activities and land-use practices with negative effects on biodiversity are of high priority. Climate change is likely to have an exacerbating effect, causing a temporal and spatial ecological asynchrony that adversely influences migratory landbird populations.

This document constitutes a unifying international plan of action to focus implementation and delivery to address the key pressures facing migratory landbird species within the African-Eurasian flyway. It details specific actions; however, the mode of implementation is dependent on strategies and resource availability in and across Range States in the African-Eurasian flyway region. This Action Plan complements the work of the Agreement on the Conservation of African-Eurasian Migratory Waterbirds (AEWA) and the Memorandum of Understanding on the Conservation of Migratory Birds of Prey in Africa and Eurasia (Raptor MOU), also encompassing the CMS MOUs on Aquatic Warbler and Middle European Great Bustard, as well as identify areas of synergy with other instruments that have the potential to contribute to the conservation of migratory bird species, such as the Bern Convention.

There is the need for immediate and concerted international actions to conserve African-Eurasian migratory landbird species and to maintain and/or restore their populations to a favourable conservation status. The effective implementation and enforcement of the actions listed in this Action Plan depends on the involvement of, and cooperation between, all Range States in the region, as well as relevant international and national intergovernmental, non-governmental and private sector

organisations, with the aim of encouraging research, training and awareness-raising to maintain, restore, manage and monitor migratory landbird species. Consult Annex 1 for further details on the introduction and background information.

**The aim** of this Action Plan is to improve the conservation status of migratory landbird species in the African-Eurasian region through international coordination of action for these species and catalysing necessary actions at the national level.

**The overall goal** is to develop an initial overarching and common strategic framework for action at the international level to protect, conserve, restore, and sustainably manage populations of migratory landbird species and their habitats in the African-Eurasian region.

## **SCOPE OF ACTION PLAN**

The geographic scope of this Action Plan is the area of the migration systems of African-Eurasian landbird species, hereafter referred to as the 'Action Plan area'. This includes Africa, Europe, the Middle East, Central Asia, Afghanistan and the Indian sub-continent. Consult Annex 2 for the map of the Action Plan area and list of Range States.

The taxonomic scope comprises populations of Galliformes, Gruiformes, Charadriformes, Columbiformes, Caprimulgiformes, Apodiformes, Cuculiformes, Coraciiformes, Piciformes and Passeriformes, which are principally ecologically dependent on terrestrial habitats and for which the entire population, or significant proportions of the population, cyclically and predictably cross one or more national jurisdictional boundaries.

The migratory landbird species covered by this Action Plan are further classified into three categories:

- A (globally threatened and near-threatened),
- B (Least Concern, but with decreasing global population trends), and
- C (Least Concern, with increasing, stable or unknown global population trends).

Migratory landbird species covered by AEWA, the Raptor MOU or other instruments have been included, but indicated as such in Annex 3 of this Action Plan. Consult Annex 3 for the detailed species list.

#### THREATS TO MIGRATORY LANDBIRD SPECIES

Migratory landbird species depend on a variety of terrestrial habitats throughout the flyway. Factors that limit population trends may occur in breeding, stop-over or non-breeding sites and landscapes. Habitat loss and degradation poses the most important threat to migratory landbird species. Taking<sup>2</sup> and trade for economic, subsistence, recreational and cultural purposes may also negatively influence their populations. Other threats include the risk of disease and collision.

Besides direct action to address these pressures, there is an urgent need for research and monitoring as well as education and information to provide useful data that directs conservation efforts and increases public awareness and support, respectively.

All of these threats and responses to them are covered by the various actions contained hereafter. Consult Annex 4 for a matrix indicating how implementing each action can aid in the achievement of other policy frameworks and regulations.

<sup>2</sup> 'Taking' means taking, hunting, fishing, capturing, harassing, deliberate killing, or attempting to engage in any such conduct – CMS Convention Text, 1979.

#### **LIST OF ACTIONS**

Unless otherwise stated, the following actions are for implementation by the CMS Parties and other Range States (consult Annex 2 for list of Range States), in liaison with competent national and international organisations and other relevant stakeholders. Consult Annex 5 for a matrix highlighting parties and/or institutions responsible for the implementation of each action.

Actions are categorized into thematic groups, and though some actions are cross-cutting, effort has been made to limit the repetition in this Action Plan. Consult Annex 1 for further details under each thematic section and Annex 6 for a reference list of documents referred to in this Action Plan.

# Classification key for actions

Anticipating immediate or early commencement of all actions, each is classified according to when results are expected (reporting timeline) and the priority for the action as determined by likely influence on the achievement of the overall goal of this Action Plan.

#### Timeline:

- S = results expected in short-term and actions that are already ongoing, (within one CMS COP intersessional period (i.e. three years));
- M = results expected in medium term, (within two COP intersessional periods (i.e. six years));
- L = results expected in long term, (within three COP intersessional periods or more (i.e. nine years or more)).

# Priority:

- 1 = high (an activity needed to prevent the extinction of a migratory landbird species within the Action Plan area),
- 2 = medium (an activity needed to prevent or reverse population declines in any globally threatened or near threatened migratory landbird species, or the majority of other migratory landbird species with a declining population trend within the Action Plan area),
- 3 = low (an activity needed to restore populations of a globally threatened or near threatened migratory landbird species, or to prevent population declines in any migratory landbird species).

#### 1.0 HABITAT CONSERVATION

#### 1.1 Land-use changes

# 1.1.1 Agriculture

#### 1.1.1.1 Intensive agriculture

- 1. Develop and implement new policies or review existing policies that maintain and manage natural and semi-natural habitats of value for migratory landbird species within otherwise wide-scale and/or intensively managed, or cropped, agricultural landscapes including the promotion of agri-environment schemes and, where these exist, the removal of perverse incentives and subsidies [M / 1].
- 2. Promote types of biodiversity-friendly farming systems that are favourable to migratory landbird species [S / 1].
- 3. Develop landscape design principles and guidance to mitigate the negative consequences of large-scale and/or intensive forms of agriculture on migratory landbird species and their habitats and share relevant experiences and good practices through collaboration between Range States [S / 2].
- 4. *Undertake Strategic Environmental Assessments*, as far as possible, to determine overall policies and plans for agriculture that fully consider migratory landbird species, their habitats and other biodiversity [M / 2].

5. Develop land-use planning strategies, using an ecosystem approach, for the conservation of the habitats of importance to migratory landbird species, and ensure the integration of environmental considerations within national agricultural policies – [M / 1].

# 1.1.1.2 Traditional agriculture including pastoralism and small-scale cropping systems

- 6. Promote agricultural policies that support participatory, sustainable natural resource management practices, e.g. small-scale agriculture and traditional farming methods (including pastoralism), that benefit populations of migratory landbird species and other biodiversity, including the promotion of appropriate measures within agrienvironment schemes and the removal of perverse incentives and subsidies, where these exist [M / 1].
- 7. Work with and empower local communities to advocate, develop and implement participatory approaches and incentives aimed at integrated, sustainable management of natural resources. This should encourage sustainable small-scale agriculture and woodland management, zonation of grazing, alternative income generation including habitat restoration where appropriate, improving both human livelihoods and the quality of habitat for migratory landbird species [M / 1].
- 8. Facilitate the sharing, internationally, of relevant pastoralist and small-scale agricultural experiences and good practices, which employ land-use systems that are ecologically sustainable and support populations of migratory landbird species. Support the documentation of case studies [S / 2].
- 9. Endeavour to include migratory bird habitat requirements into existing initiatives that work with farmers and local communities, such as the World Initiative for Sustainable Pastoralism³ (WISP) insofar as they cater for the needs of migratory landbird species, including by encouraging the development and implementation of interdisciplinary strategies for sustainable pastoralism based on traditional institutions for regulating resource use, but informed by seasonal or longer-term climatic forecasts [M / 2].

# 1.1.2 Timber and non-timber forest products

10. Include the habitat requirements of migratory landbird species in the development and implementation of national integrated woodland management plans. Where appropriate, woodlots or plantations of timber trees and/or sustainably managed community forest initiatives should be promoted to reduce pressures on natural forest habitats. Contribute to the implementation of the Work Programme on Forests of the Convention on Biological Diversity (CBD) – [M / 1].

## 1.1.3 Water management

- 11. Implement, and promote widely, the Ramsar Convention's guidance on wetlands and river basin management (Resolution X.19), especially, but not restricted to, the need to maintain natural river flows that maintain the ecological character of associated wetlands [S / 1].
- 12. Regulate anthropogenic threats liable to cause degradation and/or loss of wetlands important for migratory landbird species and initiate rehabilitation or restoration programmes, where feasible and appropriate. This will involve the introduction or the enforcement of appropriate regulations or standards and control measures at important wetland sites, as well as at sites that have already suffered degradation as a result of the impacts of factors such as unsustainable use, agriculture, uncontrolled fires, spread of aquatic invasive non-native species, hydrological change, climate change, natural succession, eutrophication and pollution [L / 1].

<sup>&</sup>lt;sup>3</sup> The IUCN World Initiative for Sustainable Pastoralism (WISP) is a global initiative that supports the empowerment of pastoralists to sustainably manage drylands resources.

# 1.1.4 Energy

- 13. Ensure that new energy developments likely to have a significant impact on migratory landbird species adopt early-stage and high-level strategic planning processes involving Strategic Environmental Impact Assessments (SEA) and stakeholder consultation and where possible and appropriate, advocate for alternative renewable energy sources [S / 1]
- 14. Ensure that a strategic approach is adopted with respect to the location of alternative renewable energy developments. This should include mapping renewable energy potential and overlaying this information with maps of key sites and habitats for migratory landbird species and other relevant biodiversity, as well as migration corridors [M / 1].
- 15. Institute sustainable land-use and energy management policies that consider biodiversity, including migratory landbird species, their habitats and other biodiversity [L / 1].
- 16. Seek to reduce the dependence on wood fuel, as appropriate, through policies and by supporting initiatives that promote, and make available, alternative renewable sources of energy for heating, lighting and cooking [S / 1].
- 17. Ensure that planned new hydro-electric reservoirs and other schemes modifying natural hydrology are subject to rigorous Environmental Impact Assessments to ensure that their design mitigates any harm to, and maximises the potential for environmental benefits for, migratory landbird species and their habitats [S / 1].
- 18. Mitigate effects of existing hydrodams by allowing well-managed, artificial discharge/flooding downstream, which can be an effective way of restoring floodplain habitats (including flood forests, where necessary aided by replanting/regeneration) and local livelihoods such as rice and arable cultures [L / 2].

# 1.1.5 Re-vegetation (including reforestation), and reducing desertification and carbon emissions from deforestation and degradation

- Encourage the use of indigenous trees or other plants that are of high value to migratory landbird species in appropriate afforestation or re-afforestation initiatives. This action will require detailed monitoring and research into resource use by migratory landbird species to inform the most appropriate implementation – [L / 1].
- 20. Incorporate into measures being taken to implement the UN Convention to Combat Desertification (UNCCD) considerations of migratory landbird species conservation, and particularly the recommendations and actions contained within this Action Plan [S / 1].

#### 1.1.6 Integrated land-use management

21. Encourage local implementation of land-use management policies, potentially through appropriate incentive programmes. Provide national support for cross-cutting themes such as the CBD Ecosystem Approach, which is a strategy for the integrated management of land, water and living resources that promotes conservation and sustainable use in a fair and equitable way – [M / 1].

#### 1.2 Sites of national or international importance to migratory landbird species

22. Undertake and publish national inventories of the sites of importance to migratory landbird species, in liaison, where appropriate, with competent international conservation organisations – [S / 1].

- 23. Facilitate and promote designation of sites important to migratory landbird species under appropriate national and international conservation categories (e.g. as nature reserves, national parks, wildlife reserves, sanctuaries, non-hunting areas, and other relevant systems of protection), or other approaches that can lead to adequate management practices [S / 1].
- 24. Establish a Critical Site Network taking into account the relationship between sites which may be ecologically linked to each other, in physical terms, for example as connecting habitat corridors, or in other ecological terms, for example as breeding areas related to non-breeding areas, stopover sites, feeding and/or resting places. Research into and information about migratory landbird species tracked during migratory movement will enable the accurate identification of these site networks [S / 1].
- 25. Review and where necessary, establish and implement appropriate and effective conservation site management plans that incorporate appropriate prescriptions for migrant landbird species [M / 1].
- 26. Promote participatory approaches in the planning, management and conservation of sites, so as to enable the engagement of, and benefit-sharing with, local communities where these are present [M / 1].

# 1.3 Climate change

27. Implement measures outlined in AEWA Resolution 5.13 (Climate Change Adaptation Measures for Waterbirds), Ramsar Resolution X.24 (Climate Change and Wetlands) and CMS Resolutions 9.7 (Climate Change Impact on Migratory Species), 10.19 (Migratory Species Conservation in the Light of Climate Change) and COP11/Doc.23.4.2 (Programme of Work on Climate Change and Migratory Species), as well as actions outlined elsewhere in this Action Plan, in order to increase the resilience of migratory landbird species and their potential to adapt to climate change – [L / 3].

#### 2.0 TAKING<sup>4</sup> AND TRADE

28. Identify migratory landbird species that are the subject of taking and trade, as well as determining the extent to which this exploitation is legal and regulated and, in consultation with other Range States, whether it is sustainable at a population level across the Action Plan area – [M / 2].

#### 2.1 Regulation of legal taking

20 Enguro logal n

- 29. Ensure legal protection of migratory landbird species of greatest conservation concern, i.e. especially those listed in Category A of Annex 3 of this Action Plan [S / 1].
- 30. Establish limits on the number and means of taking of migratory landbird species and provide adequate controls to ensure that these limits are observed. This can take the form of a national management plan for the harvest and exploitation of migratory landbird species and will need to involve the prohibition of all indiscriminate means of taking [S / 1].

<sup>&</sup>lt;sup>4</sup> 'Taking' means taking, hunting, fishing, capturing, harassing, deliberate killing, or attempting to engage in any such conduct – CMS Convention Text, 1979.

- 31. Give conservation priority to migratory landbird species with declining global population trends, i.e. species listed in Category B of Annex 3 of this Action Plan. The adoption of appropriate monitoring systems and the production of adaptive management plans are suggested for species, especially legal quarry species, for which taking may be a significant contributory factor to population declines [S / 1].
- 32. Regulate all taking and trade of migratory landbird species with increasing, stable or unknown global population trends, i.e. species listed in Category C of Annex 3 of this Action Plan, as well as institute their monitoring [S / 1].
- 33. Compile national lists of quarry migratory landbird species, hunting seasons and trade across Range States, to ensure sustainability of taking at the flyway scale and an accurate determination of hunting pressure [S / 1].
- 34. Implement alternative livelihood programmes or captive breeding programmes for migratory landbird species utilised as food sources where evidence suggests that subsistence hunting of migrant landbird species is unsustainable [M / 1].

## 2.2 Illegal taking

- 35. Promote international cooperation between enforcement authorities and other stakeholders in the regulation, implementation and enforcement of the taking and trade of migratory landbird species, and implement measures outlined in CMS Resolution 11.16 on Illegal Killing, Taking and Trade of Migratory Birds [S / 1].
- 36. Take action through existing legal instruments regulating domestic and/or international trade (e.g. CITES) where there is evidence that trade (legal or illegal) is driving unsustainable taking of birds. Active participation with CITES by all Range States is encouraged. Where domestic instruments do not presently exist, explore processes for their introduction, implementation and enforcement [M / 2].

#### 2.3 Disturbance from human activities

- 37. Promote studies to evaluate the effect of human disturbance at key sites and use the results in management planning contexts to minimise negative effects [L / 3].
- 38. Encourage the development and implementation of effective management plans at sensitive sites, including appropriate regulation of hunting and recreational activities to eliminate potentially damaging disturbance at critical periods during the annual cycle of migratory landbird species [S / 2].
- 39. Promote public experience of the wonder of migration and migratory landbird species by raising awareness and providing information, and where appropriate regulate access to congregatory sites or bottlenecks [S / 1].

#### 2.4 Human-wildlife conflict

- 40. Conduct a national review to identify those species of migratory landbird species for which human-wildlife conflict is a potential problem. This information should form the basis for all deliberations about the implementation of control or culling programmes nationally. Exceptions to, or derogations from, protective legislation to allow control and/or culling of migratory landbird species should only be given under strict conditions and be subject to careful monitoring and reporting of outcomes—[S / 1].
- 41. Ensure adequate statutory controls are in place, relating to the use of control procedures, and where practicable provide guidance for liaison with agriculture departments regarding appropriate control of pest bird species [M / 2].

42. *Promote alternative, non-lethal means of avoiding conflict* in liaison with agriculture departments and other relevant regulatory bodies – [S / 1].

#### 2.5 Poisoning

- 43. Substitute, restrict or ban substances of high risk to migratory landbird species, including insecticides, second generation anticoagulant rodenticides (SGARs) and veterinary pharmaceuticals for domestic ungulates causing lethal and sub-lethal effects to migratory landbird species, and implement measures outlined in CMS Resolution 11.15 on Guidelines to Prevent Poisoning of Migratory Birds [M / 1].
- 44. *Include migratory landbird criteria in Rotterdam Convention* to reduce risk of imports of products highly toxic to migratory landbird species within Range States [S / 2].
- 45. Encourage national legislative mechanisms to monitor agricultural use of pesticide substances, and adoption of an integrated pest management (IPM) that incorporates a certification scheme for farmers. IPM is a sustainable approach to crop production and protection that combines different management strategies and practices to grow healthy crops and minimise the use of pesticides, thereby limiting the risk of poisoning of non-target species, including birds. Incentives are needed to encourage current users of substances of risk to birds, particularly in agricultural crops (food and non-food crops), to move to an IPM approach [M / 2].
- 46. Discourage long-term or permanent baiting, applying pesticides only when infestations are present, and followed by bait removal, reducing risk to non-target species [S / 1].
- 47. Promote the use of, and awareness of, lead ammunition-free hunting, fishing and wildlife management. Given the rapid development of non-toxic alternatives to lead ammunition and fishing weights, legislation should be adopted to immediately substitute lead ammunition and fishing weights for non-toxic alternatives. To reduce problems with monitoring, compliance and enforcement, such processes should not be partially restrictive, and should involve restriction on both sale and possession of lead ammunition.

#### 3.0 OTHER THREATS

### 3.1 Diseases

- 48. In the event of a disease outbreak or mass mortality episode that may impact populations of migratory landbird species, conduct epidemiological and other research to inform mitigation, and response actions. Based on this information, integrate prevention of disease transmission into the management planning of protected areas following a One Health approach. Guidance can be drawn from the Ramsar Wetland Disease Manual [M / 2].
- 49. Develop and implement emergency measures when exceptionally unfavourable or endangering conditions (e.g. pesticides, wildlife disease, harsh weather) occur anywhere in the Action Plan area, ensuring close co-operation across the Action Plan area and with other stakeholders whenever possible and relevant [M / 2].

#### 3.2 Collisions

50. Ensure appropriate legislation is in place and enforced to restrict construction of structures posing potential collision risks at known migration staging sites and along migration routes – [S / 1].

51. Introduce appropriate mitigation measures for the various collision risks, e.g. adapting types of light source to reduce light pollution where these result in incidences of window strikes by migratory landbird species, as well as introducing measures to reduce the collision risk posed by wind farms. Implement measures outlined in CMS Resolution 10.11 on Power Lines and Migratory Birds that provides a framework for implementing one element of collision risk across CMS-signatory Range States – [S / 1].

#### 4.0 RESEARCH AND MONITORING

# 4.1 Understanding migration patterns and connectivity along flyways

52. Further develop existing and establish new international and local collaborative projects that potentially refine existing international standardised field protocols and data sets and contribute to an improved flyway-scale understanding of migratory patterns, habitat use and carry-over effects – [S / 1].

# 4.2 Monitoring of population trends

- 53. Develop and implement standardised national monitoring schemes for migratory landbird species and their habitats. Consider following the successful model that exists in Europe and some countries in Africa, based on participatory schemes using volunteer observers, local conservation groups and Site Support Groups, coordinated as far as possible with international efforts, with harmonisation of monitoring protocols [M / 1].
- 54. Encourage, support and promote standardised bird monitoring programmes at sites, ecological research to understand the ecological importance of these areas, and the publication of data and information so obtained. Produce regular national and/or regional reports detailing research at sites of importance for migratory landbird species [S / 3].
- 55. Encourage the active use of existing regional and sub-regional online databases by Range State, as well as establish modalities for information sharing and linkage between existing databases [L / 2].

# 4.3 Understanding causes of population change in migratory landbird species

- 56. Diagnose the causes of population change and undertake targeted ecological studies of selected 'indicator species' and relevant associated habitats, including comparative approaches with populations that are not declining [M / 2].
- 57. Understand the connections between ecological factors limiting migratory landbird populations and socio-economic issues and policies, and changes therein, especially those relating to land use and energy [M/1].

# 4.4 Build capacity and improve the exchange of information, collaboration and coordination between researchers studying migratory landbird species

- 58. Facilitate comprehensive gap analyses to identify and prioritise research needs, including an inventory of past and ongoing research within sub-regions of the Action Plan area through encouraging engagement of national experts on migratory landbird species with the Action Plan coordinating bodies, such as the AEML-SG [S / 1].
- 59. Encourage the development of the Migrant Landbird species Study Group (MLSG), an international network of specialists and organisations involved in research, monitoring and conservation of migratory landbird species, and encourage

participation by national experts in the MLSG. The MLSG will be run on a voluntary basis by researchers and should consider having or contributing to a clearing house function (collect, consolidate and distribute migratory landbird conservation-related research and monitoring information in the Action Plan area) – [M / 1].

- 60. Encourage researchers and funders to focus on the most important and urgent issues for migratory landbird species conservation including through disseminating priority research needs, analysing existing data sets, establishing research consortia to address key conservation issues and identifying and supporting the development and geographical expansion of sub-regional research institutes [M / 2].
- 61. Support the provision of targeted research and monitoring training to develop national skills, expertise and capacity to undertake research and monitoring to benefit the conservation of migratory landbird species [S / 1].

#### 5.0 EDUCATION AND INFORMATION

## 5.1 Improve public awareness and understanding about migratory landbird species

- 62. Support and encourage public participation in 'Friends of the Landbirds Action Plan' (FLAP), an initiative that will use online social media to provide a forum for all interested in and who care about migratory landbird species to follow, support and contribute to the work of the AEML-WG [S / 1].
- 63. Encourage local, national and international engagement with private organisations and public agencies, especially in the development sector, particularly agriculture, energy and manufacturing. This is aimed at information sharing and the formulation of development strategies that are economic and ecologically sustainable [M / 1].

# **ANNEX 1**

# AFRICAN-EURASIAN MIGRATORY LANDBIRDS ACTION PLAN ANNEX 1: BACKGROUND DOCUMENT TO THE ACTION PLAN

Version 28 April 2014

#### INTRODUCTION

#### The issue

Urgent action is needed to reverse significant population declines of many species of migratory landbirds within the African-Eurasian flyway region. It is also crucial to improve knowledge regarding their conservation status. Appropriate actions are of vital importance because these species are an ecologically, economically, culturally and intrinsically important component of biodiversity, which are shared across a huge geographical area comprising many Range States.

During the life cycle of migratory landbird species, many habitats are utilised across a geographic range that extends far beyond their breeding territory, often across many national boundaries. The network of sites of various habitats used by migratory birds is like a chain in which every link is hugely important; if one link is affected, adverse effects can carry over to other links and influence the population as a whole.

For some species, declines can be explained by changes in productivity in European breeding areas due to habitat deterioration, for others the bottleneck may be at spring refuelling sites in the Northern Mediterranean, and for others still, the declines may be driven by reduced survival due to changes in habitat in their Sub-Saharan African non-breeding areas. Also, reduced food availability in the non-breeding areas can have carry over effects leading to reduced productivity in the breeding areas. Thus for the conservation of these species flyway approach is necessary, taking into consideration the species requirements along the whole flyway. Additionally, climate change causes changes in breeding success due to loss of synchronisation of birds and their prey. Lastly, the current favourable conditions of certain species in breeding and stop-over areas need to be monitored in view of possible future changes.

Since many migratory landbird species are dispersed across the wider landscape rather than being confined to discrete sites, the conservation of most of them cannot be achieved through a site-based approach only, but is inextricably linked to human land use of the wider environment.

Population declines of migratory landbird species are primarily caused by changes to habitats and land use patterns, ultimately related to rapidly growing human populations seeking improvements in quality of life and livelihoods. This is leading to increasing demands for water, food, land, energy and other resources. Together with climate-related environmental change, these pressures on the environment result in complex, inter-related modifications to landscapes, habitats, sites, and populations of the species they support.

Sustainable human development depends on the provision of ecosystem services by a healthy environment: the population status of birds provides an important indicator of this and a favourable conservation status of birds is also recognised as an important conservation goal in its own right<sup>5</sup>. Recognising continued human development needs, actions in this Plan seek to combine development priorities with conservation actions targeted at migratory landbird species to ensure sustainable development.

Central to ultimate success is the need for integrated land-use policies across government structures and involving all relevant sectors. This will contribute to the CBD Strategic Plan for biodiversity, in particular Aichi target 12<sup>6</sup>.

<sup>5</sup> Bennun et al. (2005) Monitoring Important Bird Areas in Africa: towards a sustainable and scalable system. Biodiversity and Conservation 14 (11) 2575-2590.

<sup>&</sup>lt;sup>6</sup> 'By 2020 the extinction of known threatened species has been prevented and their conservation status, particularly of those most in decline, has been improved and sustained' (CBD, 2010).

#### **Action Plan mechanism**

The 10<sup>th</sup> Conference of the Parties (COP) to the UNEP/CMS (Convention on Migratory Species) adopted Resolution 10.27 on *Improving the Conservation Status of Migratory Landbirds in the African Eurasian Region*. The Resolution urges Parties to develop an Action Plan for the conservation of African-Eurasian migratory landbird species and their habitats throughout the flyway and calls for the establishment of a working group to steer the production and implementation of the Action Plan. The development of this action plan by the African-Eurasian Migratory Landbirds Working Group (AEML-WG), with support from the UNEP/CMS Secretariat and BirdLife International, is a consequence of the mandate of the CMS Resolution, which also requests the cooperation of Range States and other stakeholders.

This plan complements the work on migratory species of the African-Eurasian Waterbird Agreement (AEWA) and the African-Eurasian Raptor Memorandum of Understanding (Raptor MoU). It provides a framework for enhanced engagement in the region for the conservation and protection of migratory landbird species. The main focus of the plan is on strengthening international cooperation, with capacity development at the national level.

#### **SCOPE OF ACTION PLAN**

#### **Range States**

The geographic scope of this Action Plan is the area of the migration systems of African-Eurasian migratory landbird species, hereafter referred to as the 'Action Plan area'. This includes Africa, Europe, the Middle East, Central Asia, Afghanistan and the Indian sub-continent. Consult Annex 2 for the map of the Action Plan area and list of Range States.

## Species covered by this Action Plan

The species covered by this Action Plan include all migratory populations of Galliformes, Gruiformes, Charadriformes, Columbiformes, Caprimulgiformes, Apodiformes, Cuculiformes, Coraciiformes, Piciformes and Passeriformes that are principally ecologically dependent on terrestrial habitats, have a range which lies entirely or partly within the Action Plan area, and make regular seasonal interand intra-continental movements within the geographical area covered by the Action Plan. Consult Annex 3 for the detailed species list.

This Action Plan sets out to particularly include species that are not covered by either the Agreement on the Conservation of African-Eurasian Migratory Waterbirds (AEWA) and the Action Plan for the Central Asian Flyway (water birds) or the CMS Raptor Memorandum of Understanding (MOU). However, migratory landbird species that are covered by these instruments, and other policy instruments, have been indicated as such in Annex 3 of this Action Plan. CMS defines waterbirds (covered by AEWA) as 'those species of birds that are ecologically dependent on wetlands for at least part of their annual cycle' and birds of prey (covered by the Raptor MOU) as 'migratory populations of Falconiformes and Strigiformes species'.

The migratory landbird species listed in Annex 3 are classified into three categories:

- Category A: comprising globally threatened (critically endangered, endangered and vulnerable) and near-threatened migratory landbird species which should be the subject of strict protection measures and subject to a flyway recovery plan;
- Category B: comprising migratory landbird species listed by IUCN as of Least Concern but with declining global population trends; and
- Category C: including all other migratory landbird species within the Action Plan area, with increasing, stable or unknown global population trends.

#### **ACTION PLAN THEMES**

#### 1.0 HABITAT CONSERVATION

Landbird species migrate on a broad front and have a widely dispersed distribution across habitats, using breeding and non-breeding sites within diverse landscapes or biomes. Therefore, conservation of suitable sites, habitats, and landscapes will depend on the adoption of appropriate land-use policies and practices at the international, national and local levels.

# **Priority habitats**

In the context of this Action Plan, the priority habitats for African-Eurasian migratory landbird species are:

- aridlands and deserts,
- grassland and shrubland,
- forest and woodland,
- reed-beds and other natural wetland margins,
- riverine flood plains (which typically may include reed-bed and damp grassland),
- coastal habitats used as staging areas,
- oases, and
- islands.

# 1.1 Land-use changes

Despite the relatively wide and dispersed distribution of most migratory landbird species, which will usually require a wider countryside approach, several types of discrete sites<sup>7</sup> may be important for them and require targeted conservation. These include, but are not limited to, migratory staging areas (for example in coastal zones or at desert oases, as well as on islands), congregatory roosting areas, breeding sites where nesting birds are concentrated, sites on migratory routes where large numbers congregate in certain seasons and protected areas within a landscape of otherwise unsuitable habitat. Conservation of such sites will usually provide benefits not just for migratory landbird species but also for a range of other biodiversity and for people, through the continued reliable provision of ecological services.

CMS Resolution 10.3 on *The Role of Ecological Networks in the Conservation of Migratory Species* calls on Parties to consider the network approach in the implementation of CMS instruments and initiatives, and invites Parties, Range States and other relevant organizations to identify, designate and maintain comprehensive and coherent ecological networks of protected sites and other adequately managed sites of international and national importance for migratory animals.

# 1.1.1 Agriculture

1.1.1.1 Intensive agriculture

Throughout most of the African-Eurasian region, the trends are towards monocultural or near-monocultural agriculture over extensive areas, as this provides efficiencies of scale. Typically, such highly altered landscapes represent resource-poor environments for birds because of their limited structural and biological diversity.

Relatively small changes to the spatial and ecological patterning [heterogeneity] of intensively farmed areas, such as those advocated as options available in many European agrienvironment schemes, can markedly enhance their importance for birds. Such changes can additionally provide enhancements to ecological services of particular importance to farmers, such as pest control, pollination, soil stabilization and runoff control.

Defined as areas distinct in habitat and/or ornithological importance from the surroundings and which have definable and recognizable character.

Conservation and/or design of such agricultural landscapes needs to be promoted through agricultural policy and advocacy, integrating considerations of biodiversity and the requirements of migratory landbird species with the provision of ecosystem services, and measures for combating poverty, desertification and the longer-term effects of climate change whilst taking account of food, water and energy security imperatives. Consideration of where to site new intensive agricultural development zones should therefore ideally be addressed by national or regional Strategic Environmental Assessments that bring together all of these sectors.

# 1.1.1.2 Traditional agriculture including pastoralism and small-scale cropping systems

Small-scale and/or traditional agricultural land management practises often contain a mosaic of habitats that are more-or-less transformed from a natural state and which may represent important landscapes for migratory landbird species.

The pressure of providing food security for an increasing human population can lead to the loss of small-scale and traditional forms of agricultural land management practices in favour of the development of more intensive arable agricultural systems, and ultimately to habitat degradation and a reduction in biodiversity. Similarly, in pastoral landscapes, overgrazing and excessive tree removal can ultimately lead to soil erosion and desertification. This renders landscapes relatively inhospitable to many species of migratory landbird species and has the effect of expanding the ecological barriers that they must pass in order to reach the resource-rich habitats that they rely on.

Policies that sustain small-scale and traditional systems of agriculture are not only of value for migratory landbird species, but will promote the provision of a wide range of associated ecosystem services important for human populations. Policies supportive of such farming systems, and implemented with the full participation of local communities, help to maintain culturally important landscapes. There are often opportunities to work with development and other aid agencies in the application of policies that promote and support sustainable small-scale farming enterprises.

## 1.1.2 Timber and non-timber forest products

Global demand for timber for the manufacturing and construction industries is considerable and where indiscriminate, or if resources are not managed sustainably, may have significant impacts on forest and woodland habitats and ecosystems and the structural heterogeneity of the landscape. In particular, clear-felling or the selective removal of timber or non-timber forest products (e.g. nuts and seeds, berries, foliage, medicinal plants and fuel wood) from native forest and woodland may lead to the loss of indigenous trees and plants that provide important resources for migratory landbird species.

# 1.1.3 Water management

Wetland habitats, such as riparian fringes, reed-beds, seasonally flooded forest and floodplain grasslands, are important to migratory landbirds as well as waterbirds. Actions that promote the conservation and sustainable use of such habitats will benefit those species that use them.

Wetlands are the largest land-based store of carbon, serving a key ecological function. The draining and degradation of wetlands turn them into a source of greenhouse gas emissions. The restoration of damaged wetlands can reduce these emissions and potentially reverse the trend.

Medium- and large-scale damming projects along waterways can radically influence hydrological regimes at catchment scales, and also have the potential for wider-scale impact on both biodiversity and livelihoods by altered dynamics downstream.

# 1.1.4 Energy

Development of infrastructure to support energy production including those of renewable energy sources (for example, solar, wind, hydro or bio-energy) can have significant impacts on land-use and habitats important to migratory landbird species. It is imperative to incorporate early-stage and high-level strategic planning, Strategic Environmental Impact Assessments (SEA) and stakeholder consultation in order to ensure that the impact on ecosystems and biodiversity, including to migratory landbird species, is minimised.

In particular, energy policies should ensure that biomass production does not lead to the clearing of natural habitats, overexploitation of forests or unsustainable agriculture intensification. In many developing countries, a major cause of environmental degradation comes from the increasing demand for firewood — leading to a loss of trees from the environment and ultimately, deforestation. Policies that reduce this demand, for example through the provision of fuel-efficient cooking stoves or stoves powered by renewable sources of energy (such as small-scale wind or photovoltaic electricity production), will not only enhance human quality of life but also provide environmental benefits. Collaborative work on this issue with development agencies will be highly advantageous.

Investing in solar energy is preferably to hydrodams, particularly in arid environments, since water is much better used for agriculture and nature than for energy. Similarly, using land and water to grow biofuels (currently mainly for the European market) is a perverse use of precious resources under such circumstances.

# 1.1.5 Re-vegetation (including reforestation), and reducing desertification and carbon emissions from deforestation and degradation

Carbon sequestration policies that encourage tree-planting or woodland conservation may give opportunities to provide benefits for migratory landbird species, through ensuring that indigenous tree species of relatively high value to migratory landbird species are planted or maintained. The ecological importance of different tree species for birds varies widely, and simple modifications of tree-mixes planted may have significant benefits to birds.

#### 1.1.6 Integrated land-use management

The activities of nearly all sectors of the economy affect the quality and extent of habitat for migratory landbird species, either directly or indirectly. There is need for conservation awareness across all relevant sectors, and to include the needs of migratory landbird species and other biodiversity into decision-making processes. Ecologically and socio-economically viable policies and integrated land-management initiatives need to be developed that benefit the conservation of migratory landbird species and reverse population declines.

There is a need to establish the extent to which current public policy goals, particularly in relation to combating poverty, desertification and climate change, conflict with or are complementary to migratory landbird species conservation goals. It is also crucial to determine whether habitat changes that negatively impact on birds are the result of processes that policy is trying to promote (e.g. intensification) or stop (degradation). These will help to ensure that valuable ecosystem services are not lost, and that development is genuinely sustainable.

### 1.2 Sites of national or international importance to migratory landbird species

The identification of sites of importance to migratory landbird species within the African-Eurasian flyway, and the management of these sites facilitates successful conservation of migratory landbird species. A good network of sites enables the movement of a variety of migratory landbird species; long- and short-distance migrants that utilize different movements strategies. Actions at any one site in this network will have an impact on populations of migratory landbird species that rely on this site, whether as a breeding or non-breeding site, as well as a stopover site. It is essential, therefore, to coordinate the identification of sites, especially sites critical to migratory landbird species in category A of Annex 3. It is also necessary to ensure the protection and management of the complete network of sites that are important to migratory landbird species. Site management and the development of site management plans is expected to be specific and appropriate to the conditions prevalent at each site, however relevant and responsive to a flyway-scale approach to site management.

Information sharing is a key element in networking sites and the Critical Site Network (CSN) tool<sup>8</sup> developed by Wetlands International is a good example, making it easy to obtain information on the sites critical for waterbird species by accessing several independent databases and analysing information at the biogeographical population level, so providing a comprehensive basis for management and decision making. Such an information sharing tool is needed for networking sites important for migratory landbirds

### 1.3 Climate change

Climate change will affect migratory species in as yet uncertain ways. Climate change models predict considerable regional variation in the nature and extent of change, affecting different migratory species in different ways. Migratory landbird species may be affected by habitat changes affecting nesting, passage and non-breeding areas; by changes in the phenology of vegetation and food sources; by potential expansion of barriers such as deserts; and by changes in weather systems affecting migratory flights.

As the exact effects of climate change remain hard to predict, but are likely to put even more pressure on the intricate balance of migratory bird ecology, it is important (a) to build resilience in migratory landbird populations by minimising other stressors as far as possible, and (b) to increase the scope for future climate change adaptation, by protecting networks of key sites and expanding the landscape areas under sustainable management that creates favourable conditions for migratory landbird species.

#### 2.0 TAKING AND TRADE

Migratory landbird populations are impacted by various forms of taking, either legal or illegal. The motivation for taking may include:

- recreational, as sport for food, trophies or target practice;
- consumptive, for food or local utilisation, including for private subsistence and customs;
- use of live birds for bird trade or as decovs: or
- to control species in conflict with specific human interests.

Trade of birds as food, caged birds, and trophies or for traditional practices may be a driver for taking and may in itself be undertaken legally or illegally, while leading to either legal or illegal taking. It can be undertaken domestically or internationally.

Means of taking migratory landbird species include shooting, trapping, poisoning, explosives, falconry or egg collecting. Trapping and poisoning, together with a variety of means of luring birds, tend to be illegal as they are indiscriminate.

The unregulated taking of migratory landbird species as well as the associated trade are issues throughout the African-Eurasian region, irrespective of different continental drivers. Information is lacking about the levels and impact of taking of migratory landbird species throughout the region, but especially in Africa and in Central Asia.

<sup>&</sup>lt;sup>8</sup> Further information about the CSN tool is available at: http://wow.wetlands.org/Default.aspx?TabID=1349.

As well as for subsistence or survival needs, the drivers for taking also include direct or indirect financial benefit for individuals or organized groups. Such activities continue due to the absence of, or inadequate enforcement of protection and hunting provisions within relevant conservation legislation.

# 2.1 Regulation of legal taking

The taking of game species of migratory landbird species may be sustainable where it is well regulated and monitored. However, where evidence suggests that a species population is declining, it may be a contributory cause of declines or prevent population recovery. It is particularly important to avoid hunting during periods of migration towards the breeding grounds and the breeding season as this may have a significantly greater population level impact.

### 2.2 Illegal taking

The drivers for illegal taking include direct or indirect financial profit for individuals or organized crime, generating illegal (untaxed) benefits not related to basic survival needs. Such illegal activities continue due to inadequate enforcement of the protection and hunting provisions of conservation legislation.

#### 2.3 Disturbance from human activities

There is the potential for functional loss of habitat at stop-over sites and staging areas used by migratory landbird species due to disturbance from hunting and other human activities, constraining the ecological use of those areas. Though not permanent, functional loss of habitat can represent a significant issue for migratory landbird species - where such species rely on this habitat for short periods, often while intensively refuelling, during their migratory journey.

#### 2.4 Human-wildlife conflict

Control or culling of species that are perceived to be in conflict with certain human interests, e.g. by causing damage to crops, can take place either illegally or legally. Such activities may be regarded as unsustainable at a population level if evidence suggests that the species is declining or if permissions are given for an inappropriately large take.

# 2.5 Poisoning

Migratory landbird species suffer mortality from poisons, where they are deliberately targeted as the intended victim of poisoning, or the accidental (indirect) victims of either legal or illegal use of poisons. There are five poisoning areas with the most significant risk to migratory landbirds: crop protection using insecticides and rodenticides, predator control for livestock and game estates using poison-baits, veterinary pharmaceuticals for domestic ungulates, and hunting/fishing using lead. These five priority areas are classified under two key sectors; agriculture and hunting/fishing.

Sub-lethal effects of poisoning may also include impacts on survival and productivity, for example where organochlorines cause egg-shell thinning, even when such chemicals are ingested in the non-breeding areas. These physiological sub-lethal impacts are potentially significant, but poorly understood. CMS Resolution 10.26 on *Minimizing the Risk of Poisoning to Migratory Birds* called for the establishment of a working group to undertake an assessment of the scope and severity of poisoning to migratory birds, and significant knowledge gaps and to recommend guidelines on combating poisoning. This working group operates under the Scientific Council with the title of *Minimizing Poisoning Working Group*.

#### 3.0 OTHER THREATS

# 3.1 Diseases

Migratory landbird species may be confronted by disease-related mortality and reduced productivity. Identification and understanding of migratory connectivity will add to a better assessment of the potential future role of disease as a population limiting factor for migratory landbird species.

#### 3.2 Collisions

Migratory landbird species are susceptible to mortality from collisions with structures e.g. windows, lighthouses, tower blocks, gas flares, masts, especially when illuminated and when visibility is poor. In addition, species of migratory landbirds may be affected by collisions with power lines and wind-farms.

At a local scale, mortality due to collisions with power lines can be an important factor causing a decline in populations of certain migratory landbird species. Species vulnerable to this threat tend to be long-lived species with a low reproductive rate, limited geographic distribution (even though migratory) and low numbers, e.g. bustards.

#### 4.0 RESEARCH AND MONITORING

# 4.1 Understanding migration patterns and connectivity along flyways

For populations to be effectively conserved, it is important to know their distribution throughout their annual cycle and to understand the key sites or areas necessary for successful migration.

## 4.2 Monitoring of population trends

There is an urgent need to develop and implement new national monitoring schemes to provide data and population indices for migratory landbird species occurring in the Middle East, Central Asia, the Indian sub-continent and Africa. To understand the priorities for conservation action and the responses of the populations to pressures and conservation action, it is vital to monitor population trends, and where possible also changes in habitat. For each species it may be appropriate to agree at which stage of the life-cycle monitoring is best undertaken; often it will be during the breeding season.

#### 4.3 Understand causes of population change in migratory landbird species

To focus conservation action effectively and efficiently, it is necessary to accurately diagnose the factors that may be driving population declines, their relative impacts at different stages of the annual cycle and the interactions and carry-over effects that may operate. There is a need to understand the demographic mechanisms underlying population changes, i.e. whether declines are being driven by conditions in the breeding areas, staging grounds or non-breeding areas. This information is essential in developing habitat prescriptions that will guide conservation intervention at sites within the flyways.

Also, the linkages between the limiting ecological factors (e.g. insufficient food for refuelling due to habitat degradation) with socio-economic factors (e.g. intensification of agriculture) and drivers of change (e.g. agricultural policies, markets, subsidies) need to be better understood, in order to develop effective interventions that restore bird populations.

# 4.4 Build capacity and improve the exchange of information, collaboration and coordination between researchers studying migratory landbird species

In parts of Africa, Central Asia and the Middle East, there is need to build capacity of national agencies to collate data, and to develop or revive their own national database(s), particularly using online resources so that such data is accessible to a wider community.

Compared to other groups of birds, for which there exist various sorts of specialized international and national working groups, there has been less collaboration between experts on migratory landbird species. Furthermore, research and monitoring of these birds by non-European researchers is still limited. There is an urgent need for capacity building and exchange to fill these gaps, and for better dissemination of research outputs.

#### 5.0 EDUCATION AND INFORMATION

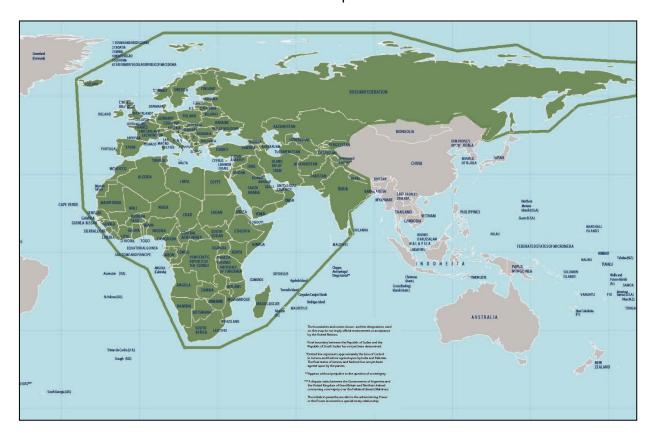

### 5.1 Improve public awareness and understanding about migratory landbird species

For effective conservation of migratory landbird species, the general public, local communities in key areas and decision makers and donors need to be aware of the value of taking care of these birds for intrinsic as well as for cultural and economic reasons, and their conservation needs.

# **ANNEX 2**

# AFRICAN-EURASIAN MIGRATORY LANDBIRDS ACTION PLAN ANNEX 2: MAP OF THE AREA INCLUDED WITHIN THE ACTION PLAN<sup>9</sup>

Version 28 April 2014

<sup>&</sup>lt;sup>9</sup> The map shows country names at the time when the AEMLAP was originally adopted (version from 2014). The table has been updated, showing country names at April 2019.

Only those Range States and territories listed below, and shown in green on this map, are included within the scope of this Action Plan.

Albania Guinea-Bissau Poland Algeria Hungary Portugal Algeria Hungary Portugal Andorra Iceland Qatar Angola Inclia Republic of Moldova Armenia Iran, Islamic Republic of Romania Armenia Iran, Islamic Republic of Romania Austria Irag Russian Federation Azerbaijan Ireland Rwanda Bahrain Israel San Marino Belgium Jordan Saudi Arabia Belgium Jordan Saudi Arabia Benin Kazakhstan Senegal Bosnia and Herzegovina Kenya Serbia Serbia Bosnia and Herzegovina Kenya Serbia Surkina Faso Latvia Silovakia Silovakia Burundi Lebanon Silovenia Cabo Verde Lesotho Somalia Cameroon Liberia South Africa Central African Republic Libya South Sudan Congo Luxembourg Sudan Corota Malawi Switzerland Corpora Luxembourg Sudan Malawi Switzerland Syrian Arab Republic Democratic Republic of the Congo Demorark, Including Faroe Islands and Greenland Dijbouti Monaco Turkey Egypt Monaco Ugarsey, the Balilwick of Jersey, in Cluding Mauritius Tunisia Heal Democratic Republic of the Congo Demorark, Including Faroe Islands and Greenland Dijbouti Monaco Turkey Egypt Montenegro Turkemeistan Eswatini Nepal United Arab Emirates United Republic of Trustrana Mauritius Tunisia Finland, including Aland Islands Namibia United Arab Emirates Eswatini Nepal United Republic of Tanzania Pipiand And Northern Ireland, including Mayotte and Refundin Andrea United Republic of Tanzania Pipiand Northern Ireland, including Mayotte and Refundin Andrea United Republic of Tanzania Pipiand Andrea United Republic of Tanzania Nigeri Uzbekistan Orman Zimbabawa and Greene, including Mayotte and Rovars, including Aland Islands Northern Ireland, including Mayotte and Refundin Andrea United Republic of Tanzania Pipiana Andrea Perincipa Andrea Corgai Orman Zimbabawa Andrea Corgai Orman Zimbab	Afghanistan	Guinea	Palestinian Authority Territories

**ANNEX 3** 

#### AFRICAN-EURASIAN MIGRATORY LANDBIRDS ACTION PLAN

**ANNEX 3: SPECIES LISTS** 

Version 12 December 2019

Attached is the dynamic<sup>10</sup> list of migratory landbird species that occur within the African Eurasian region according to the following definition:

- Migratory is defined as those species recorded within the IUCN Species Information Service (SIS) and BirdLife World Bird Database (WBDB) as 'Full Migrant', i.e. species which have a substantial proportion of the global or regional population which makes regular or seasonal cyclical movements beyond the breeding range, with predictable timing and destinations:
  - with the omission of all single-country endemic migrants, in order to conform with the CMS definition of migratory which requires a species to 'cross one or more national jurisdictional boundaries'; in reality, this has meant the removal of only one species, the Madagascar Blue-pigeon *Alectroenas madagascariensis*. However, it should be noted that removing single-country endemics is not strictly analogous with omitting species that do not cross political borders. It is quite possible for a migratory species whose range extends across multiple countries to contain no populations that actually cross national boundaries as part of their regular migration.
- 2. African-Eurasian is defined as Africa, Europe (including all of the Russian Federation and excluding Greenland), the Middle East, Central Asia, Afghanistan, and the Indian subcontinent.
- 3. Landbird is defined as those species not recorded in SIS and the WBDB as being seabirds, raptors or waterbirds, except for the following waterbird species that are recorded as not utilizing freshwater habitats: *Geronticus eremita*, *Geronticus calvus*, *Burhinus oedicnemus*, *Cursorius cursor* and *Tryngites subruficollis*.

At the time of adoption of the AEMLAP at the 11<sup>th</sup> Meeting of the Conference of the Parties to CMS, the CMS Appendices for bird species followed the taxonomy and nomenclature of Morony *et al.* (1975) for orders and families and Sibley and Monroe (1990, 1993) for genera and species. However, it was not possible to produce the necessary species list using these taxonomic treatments because BirdLife did not hold information on the geographical occurrence or migratory status of taxonomic entities not recognised by the BirdLife Taxonomic Working Group. Instead, the species list included a column indicating whether a species occurs on Sibley and Monroe and a column of synonyms used in Sibley and Monroe.

As adopted by the 11<sup>th</sup> and the 12<sup>th</sup> Meeting of the Conference of the Parties to CMS, the CMS Appendices for bird species follow now the taxonomy and nomenclature of Del Hoyo & Collar (2014, 2016). In accordance with CMS Decision 12.22 c), the Annex 3 species list was updated, reflecting this standard taxonomic reference (HBW-BirdLife Version 3.0, November 2018). In carrying out this update all entities originally listed on Annex 3 were retained and where species originally listed have since been split, all new species resulting from the split were also retained in Annex 3. Updates to the conservation status and global population trend of Annex 3 species were made using the IUCN Red List of birds (BirdLife International 2018) and the IUCN Species Information Service (SIS) database (2018).

\_

<sup>&</sup>lt;sup>10</sup> This species list is open to regular updates, based on review of the IUCN Species Information Service (SIS) and the latest version of the HBW and BirdLife taxonomic checklist.

Category A: Globally threatened and near-threatened African-Eurasian migratory landbird species

### **ANNEX 4**

### AFRICAN-EURASIAN MIGRATORY LANDBIRDS ACTION PLAN

### **ANNEX 4: CONSERVATION POLICY ACHIEVEMENT MATRIX**

Version 28 April 2014

AEMLAP Actions			Internationa	al Policies		
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
HABITAT CONSERVATION						
Land-use changes						
Intensive agriculture						
1. Develop and implement new policies or review existing policies that maintain and manage natural and semi-natural habitats of value for migratory landbird species within otherwise wide-scale and/or intensively managed, or cropped, agricultural landscapes	✓ Practical Principle 1	✓ Aichi Targets 5 & 7	✓ Goal 1 Strategies 1.3 & 1.4	<b>√</b>	✓ AP para 3.2.4	✓ SP Objective 2 Target 2.7
2. Promote types of biodiversity- friendly farming systems	✓ Practical Principle 3	Programme of Work Agricultural Biodiversity Aichi Targets 3 &		<b>✓</b>	✓ AP para 3.2.4	✓ SP Objective 2 Target 2.3

AEMLAP Actions			Internationa	al Policies		
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
3. Develop landscape design principles and guidance to mitigate the negative consequences of largescale and/or intensive forms of agriculture on migratory landbird species and their habitats	✓ Practical Principle 3	✓ Aichi Targets 5 & 7		<b>√</b>	✓ AP para 3.2.4	
Undertake Strategic     Environmental Assessments			√ Goal 1 Strategy 1.3	✓	✓ SP Target 1.3 AP para 4.3.1	✓ Resolution 7.2 SP Objective 2 Target 2.8
5. Develop land-use planning strategies, using an ecosystem approach	Practical Principle 11	✓ Aichi Targets 5, 7 & 17	✓ Goal 1 Strategy 1.3	✓	√ AP para 3.2.4	SP Objective 2 Target 2.9
Traditional agriculture including pastoralism and small-scale cropping systems						
6. Promote agricultural policies that support participatory, sustainable natural resource management practices	√ Practical Principles 2, 9 & 12	Decision XI.22 Aichi Targets 3, 5, 7, 17 & 18	✓ Goal 1 Strategy 1.4			
7. Work with and empower local communities to advocate, develop and implement participatory approaches and incentives aimed at integrated, sustainable management of natural resources	✓ Practical Principles 2, 9, 10 & 12	√ Decision XI.22 Aichi Targets 7 & 18	✓ Goal 1 Strategy 1.4			
8. Facilitate the sharing, internationally, of relevant pastoralist and small-scale agricultural experiences and good practices	✓ Practical Principle 6	✓ Aichi Targets 18 & 19	✓ Goal 3 Strategy 3.4			
9. Endeavour to include migratory bird habitat requirements into existing initiatives that work with farmers and local communities		✓ Aichi Target 7				

AEMLAP Actions		<u> </u>	Internationa		<u> </u>	
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
Timber and non-timber forest products						
10. Include the habitat requirements of migratory landbird species in the development and implementation of national integrated woodland management plans						
Water management  11. Implement, and promote widely, the Ramsar Convention's guidance on wetlands and river basin management (Resolution X.19)		√ Decision XI.23	Resolution X.19 Goal 1 Strategy 1.7	<b>√</b>		
12. Regulate anthropogenic threats liable to cause degradation and/or loss of wetlands important for migratory landbird species and initiate rehabilitation or restoration programmes, where feasible and appropriate		Programme of Work on Inland Waters Biodiversity Aichi Targets 7 & 17 Decision XI.16	Goal 1 Goal 2 Strategy 1.8 & 2.7		✓ AP para 3.3 & 3.2.3	
Energy						
13. Ensure that new energy developments likely to have a significant impact on migratory landbird species adopt early-stage and high-level strategic planning processes involving Strategic Environmental Impact Assessments (SEA) and stakeholder consultation			✓ Goal 1 Strategy 1.3	<b>✓</b>	√ Resolution 5.16 AP para 4.3.5	
14. Ensure that a strategic approach is adopted with respect to the location of alternative renewable energy developments			✓ Goal 1 Strategy 1.3	<b>~</b>	Resolution 5.16 SP Target 1.3	

AEMLAP Actions			Internationa	al Policies		
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
15. Institute sustainable land-use and energy management policies	✓ Practical Principle 3	✓ Aichi Targets 4 & 7	✓ Goal 1 Strategies 1.3 & 1.4			
16. Seek to reduce the dependence on wood fuel		✓ Aichi Target 7				
17. Ensure that planned new hydro- electric reservoirs and other schemes modifying natural hydrology are subject to rigorous Environmental Impact Assessments			✓ Goal 1 Strategies 1.3 & 1.7	<b>√</b>	Resolution 5.16 SP Target 1.3 AP para 4.3.1	Resolution 7.2 SP Objective 2 Target 2.8
18. Mitigate effects of existing hydrodams by allowing well-managed, artificial discharge/flooding downstream	√ Practical Principle 9		√ Resolution X.19 Goal 1 Strategy 1.7			
Re-vegetation (including reforestation), and reducing desertification and carbon emissions from deforestation and degradation						
19. Encourage the use of indigenous trees or other plants that are of high value to migratory landbird species in appropriate afforestation or reafforestation initiatives						
20. Incorporate into measures being taken to implement the UN Convention to Combat Desertification (UNCCD) considerations of migratory landbird species conservation	✓ Practical Principle 3					
Integrated land-use management 21. Encourage local implementation of land-use management policies, potentially through appropriate incentive programmes	Practical Principle 9, 10 & 11	✓ Aichi Targets 3 & 17	✓ Goal 1 Strategy 1.11			

AEMLAP Actions			Internationa			
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
Sites of national or international importance to migratory landbird species						
22. Undertake and publish national inventories of the sites of importance to migratory landbird species		✓ Aichi Target 19	✓ Goal 1 Strategy 1.1		✓ SP Target 1.2 AP para 3.1.1	
23. Facilitate and promote designation of sites important to migratory landbird species under appropriate national and international conservation categories		✓ Decision XI.24 Programme of Work on Protected Areas Aichi Target 11	✓ Goal 2 Strategy 2.1	<b>√</b>	✓ AP para 3.2.1	Resolution 10.3 SP Objective 2 Target 2.7
24. Establish a Critical Site Network		✓ Aichi Target 11	✓ Goal 2	<b>√</b>	✓ SP Targets 1.2 & 3.2.1	Resolution 10.3 SP Objective 2 Target 2.7
25. Review and where necessary, establish and implement appropriate and effective conservation management regimes		✓ Aichi Target 3	✓ Goal 2 Strategies 2.5 & 2.7	<b>√</b>	✓ AP para 3.2.3	
26. Promote participatory approaches in the planning, management and conservation of sites	✓ Practical Principles 9 & 12	✓ Aichi Target 18	✓ Goal 2 Strategies 2.3 & 2.7			
Climate change						
27. Implement measures outlined in AEWA Resolution 5.13 (Climate Change Adaptation Measures for Waterbirds), Ramsar Resolution X.24 (Climate Change and Wetlands) and CMS Resolutions 9.7 (Climate Change Impact on Migratory Species) and 10.19 (Migratory Species Conservation in the Light of Climate Change)		✓ Aichi Target 15	Resolution X.24		Resolution 5.13	Resolution 9.7 Resolution 10.19

TAKING AND TRADE						
28. Identify migratory landbird species that are the subject of taking and trade		✓ Aichi Target 12				√ SP Objective 1 Target 1.4
Regulation of legal taking						
29. Ensure legal protection of migratory landbird species of greatest conservation concern		✓ Aichi Target 12		✓	✓ SP Target 2.3	
30. Establish limits on the number and means of taking of migratory landbird species and provide adequate controls to ensure that these limits are observed	✓ Practical Principle 4	✓ Aichi Target 12			✓ SP Target 2.2	
31. Give conservation priority to migratory landbird species with declining global population trends		✓ Aichi Target 12		✓	√ SP Target 2.3	
32. Regulate all taking and trade of migratory landbird species with increasing, stable or unknown global population trends		√ Aichi Target 12		<b>√</b>	✓ SP Target 2.3	
33. Compile national lists of quarry migratory landbird species, hunting seasons and trade		✓ Aichi Target 19		<b>√</b>	✓ SP Targets 2.2, 2.5 & 3.1	
34. Implement alternative livelihood programmes or captive breeding programmes for migratory landbird species utilised as food sources						
Illegal taking						
35. Promote international cooperation between enforcement authorities and other stakeholders	✓ Practical Principle 8	✓ Aichi Target 12	✓ Goal 3 Strategy 3.4	✓		
36. Take action through existing legal instruments regulating domestic and/or international trade		✓ Aichi Target 12		<b>√</b>	✓ AP section 2	

AEMLAP Actions			Internationa	al Policies		
	Addis Ababa Principles and Guidelines for the Sustainable use of Biodiversity <sup>11</sup> (CBD)	CBD Strategic Plan 2011-2020 <sup>12</sup> & associated decisions	Ramsar Convention Strategic Plan <sup>13</sup> & associated decisions	EU Directive on the conservation of wild birds & related EU Directives and Regulations <sup>14</sup>	AEWA Action Plan (AP) <sup>15</sup> 2013- 2015, Strategic Plan (SP) <sup>16</sup> 2009- 2017, & associated decisions	Convention on Migratory Species Strategic Plan (SP) <sup>17</sup> 2006-2011 & associated decisions
Disturbance from human activities						
37. Promote studies to evaluate the effect of human disturbance at key sites			✓ Goal 2 Strategies 2.3 & 2.7		✓ AP paras 4.3.6 & 5.6	
38. Encourage the development and implementation of effective management plans at sensitive sites	✓ Practical Principle 9		√ Goal 2 Strategies 2.3, 2.5 & 2.7			
39. Promote public experience of the wonder of migration and migratory landbird species by raising awareness and providing information	✓ Practical Principle 14	✓ Aichi Target 1	√ Goal 4 Strategy 4.1		√ SP Target 2.3 & Resolution 3.10	
Human-wildlife conflict						
40. Conduct a national review to identify those species of migratory landbird species for which human-wildlife conflict is a potential problem					✓ AP paras 4.3.1 & 4.3.3	
41. Ensure adequate statutory controls are in place, relating to the use of control procedures				✓	✓ AP para 4.3.3	
42. Promote alternative, non-lethal	✓ Practical Principle 9					
means of avoiding conflict  Poisoning	r ractical Filliciple 9					
43. Substitute, restrict or ban substances of high risk to migratory landbird species						
44. Include migratory landbird criteria in Rotterdam Convention						
45. Encourage national legislative mechanism to monitor agricultural use of pesticide substances, and adoption of an integrated pest management (IPM) that incorporates a certification scheme for farmers

	through the	advocacy at	<b>✓</b>	into biodiversity-	<b>✓</b>	✓
	ministries of	the national		friendly farming		
O Develop londeren e desime minerales and midense to	agriculture	level		systems		
3. Develop landscape design principles and guidance to						
mitigate the negative consequences of large-scale and/or	✓			✓	✓	
intensive forms of agriculture on migratory landbird						
species and their habitats	<b>✓</b>				<b>/</b>	
4. Undertake Strategic Environmental Assessments	<b>V</b>				· ·	
5. Develop land-use planning strategies, using an	✓					
ecosystem approach						
Traditional agriculture including pastoralism and small-						
scale cropping systems						
6. Promote agricultural policies that support participatory,						
sustainable natural resource management practices						

AEMLAP Actions			Implementing C	Organizations		
	Range State governments	Range State conservation NGOs	International conservation NGOs	Research institutions	Development companies and agencies (e.g. agricultural and energy sectors)	AEML-WG and -SG
7. Work with and empower local communities to advocate, develop and implement participatory approaches and incentives aimed at integrated, sustainable management of natural resources	✓	<b>√</b>	<b>✓</b>	✓	<b>√</b>	
8. Facilitate the sharing, internationally, of relevant pastoralist and small-scale agricultural experiences and good practices	<b>✓</b>	<b>√</b>	<b>√</b>	✓	✓	✓
Endeavour to include migratory bird habitat requirements into existing initiatives that work with farmers and local communities	<b>✓</b>					
Timber and non-timber forest products						
10. Include the habitat requirements of migratory landbird species in the development and implementation of national integrated woodland management plans						
Water management						
11. Implement, and promote widely, the Ramsar Convention's guidance on wetlands and river basin management (Resolution X.19)						
12. Regulate anthropogenic threats liable to cause degradation and/or loss of wetlands important for migratory landbird species and initiate rehabilitation or restoration programmes, where feasible and appropriate						
Energy						
13. Ensure that new energy developments likely to have a significant impact on migratory landbird species adopt early-stage and high-level strategic planning processes involving Strategic Environmental Impact Assessments (SEA) and stakeholder consultation						
14. Ensure that a strategic approach is adopted with respect to the location of alternative renewable energy developments     15. Institute sustainable land-use and energy						
management policies						
16. Seek to reduce the dependence on wood fuel						

AEMLAP Actions			Implementing C	Organizations		
	Range State governments	Range State conservation NGOs	International conservation NGOs	Research institutions	Development companies and agencies (e.g. agricultural and energy sectors)	AEML-WG and -SG
17. Ensure that planned new hydro-electric reservoirs and other schemes modifying natural hydrology are subject to rigorous Environmental Impact Assessments						
18. Mitigate effects of existing hydrodams by allowing well-managed, artificial discharge/flooding downstream						
Re-vegetation (including reforestation), and reducing desertification and carbon emissions from deforestation and degradation						
19. Encourage the use of indigenous trees or other plants that are of high value to migratory landbird species in appropriate afforestation or re-afforestation initiatives						
20. Incorporate into measures being taken to implement the UN Convention to Combat Desertification (UNCCD) considerations of migratory landbird species conservation						
Integrated land-use management						
21. Encourage local implementation of land-use management policies, potentially through appropriate incentive programmes	✓	✓	✓		<b>✓</b>	
Sites of national or international importance to migratory landbird species						
22. Undertake and publish national inventories of the sites of importance to migratory landbird species	✓	✓	✓	✓		
23. Facilitate and promote designation of sites important to migratory landbird species under appropriate national and international conservation categories	✓					
24. Establish a Critical Site Network	✓	✓	✓	✓		
25. Review and where necessary, establish and implement appropriate and effective conservation management regimes	✓	<b>✓</b>			<b>√</b>	
26. Promote participatory approaches in the planning, management and conservation of sites	✓	✓			<b>✓</b>	

AEMLAP Actions		Implementing Organizations						
	Range State governments	Range State conservation NGOs	International conservation NGOs	Research institutions	Development companies and agencies (e.g. agricultural and energy sectors)	AEML-WG and -SG		
Climate change								
27. Implement measures outlined in AEWA Resolution 5.13 (Climate Change Adaptation Measures for Waterbirds), Ramsar Resolution X.24 (Climate Change and Wetlands) and CMS Resolutions 9.7 (Climate Change Impact on Migratory Species) and 10.19 (Migratory Species Conservation in the Light of Climate Change)	✓	<b>√</b>		✓	✓			
TAKING AND TRADE
